

OticeraTM

(Paradichlorobenzene, Bezocaine, Chlorbutol, Turpentine oil Ear Drops)

Composition:

Each ml contains:

Paradichlorobenzene..... % w/v
Bezocaine... .. % w/v
Chlorbutol... .. % w/v
Turpentine oil... .. % w/v
Oily base containing
Olive oil... .. q.s.

Clinical Pharmacology:

Paradichlorobenzene:

Paradichlorobenzene is a chlorinated aromatic hydrocarbon that helps remove ear wax. It reduces the thickness of the ear-wax. Acts as a ceruminolytic agent.

Chlorbutol:

Chlorbutol acts as an antimicrobial.

Turpentine oil:

Turpentine oil acts as Lubricating agent.

Benzocaine

Benzocaine acts as a local anaesthetic

Olive oil-Base

- Olive oil can also be used to help prevent the build-up of earwax.
- According to American Academy of Family Physicians, Olive oil is considered best for the purpose of wax removal.
- As per British National Formulary, all the available wax softeners should have Olive oil as the base.
- Compared to Arachis oil, which is used mostly in ear preparations, Olive oil is 96 % more effective as compared to Arachis oil which is just 91% effective.

Indications:

Oticera Drops is indicated in patient of impacted ear wax and keratosis.

Use in special population:

- Liver impairment: Use with caution.
- Renal failure: Use with caution.
- Pregnancy and lactation: Use with caution.
